

Make the right choice
for your baling needs...

Baler Type

Crop type

Baling and crop
conditions

YOUR BEST CHOICE

LSB Max

Pack length 3200m

A twine suitable for use in any big baler, when only the lowest bale density is required. Gives the maximum spool length.

LOW

LSB Long

Pack length 3000m

A standard big bale twine, suitable for use in all crops and in normal baling conditions.

STANDARD

LSB Power

Pack length 2600m

The best performing option for all crops and balers where high density is required. Use it for silage and for high density hay and straw bales.

HIGH

HD Extra

Pack length 2600m

Specially designed for use in balers in the 'Extra' high-density sector, for making extremely dense bales, or when baling in extreme conditions – high temperatures, low humidity.

VERY HIGH

HD Power

Pack length 2200m

HD Prime

Pack length 2200m

For balers in the 'Extra' high-density sector, where baling conditions demand the maximum performance. For straw baling in extreme high temperature, short straw or corn stalk.

EXTREME

Resistance and performance
as Type 130

TamaTwine+ Features:

LONGER LENGTH PACKS ⇔
LESS CHANGES ⇔
HIGHER OUTPUT
Extra pack length for less
spool changes, less risk and
higher baler efficiency.

Unrivalled knot performance,
flexible and strong, for 100%
reliable tight knots.

Uniform spool shape to
ensure trouble-free running
in the baler.

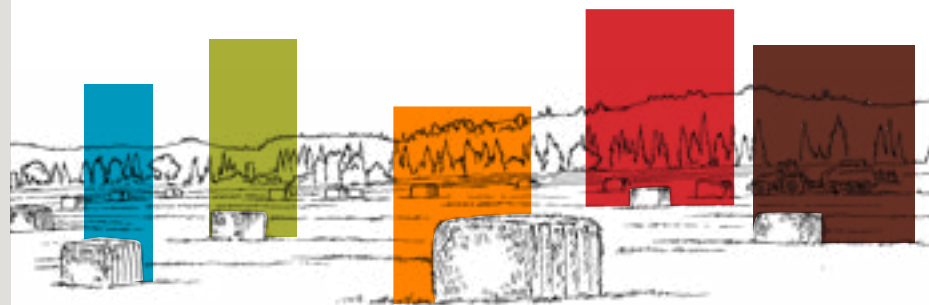

The only Big Baler twine
range fully validated by
ALL THE MAJOR BALER
PRODUCERS.

Reliable,
Non-stop baling

TamaTwine+ for Large Square Bales comes in a range of products designed to suit your needs.

Choose the strongest twine for your most demanding conditions, or opt for the longest pack length. Whichever twine you choose, you can count on high performance that will not let you down.
