## Tama Shade Nets

Protecting your crops

**Tama Shade Nets** are the best way to protect your crops against natural damage: solar radiation, frost, wind and birds.

**Tama Shade Nets** are stabilized to protect from solar UV radiation, and are extremely resistant to inclement weather and extreme temperatures and humidity.

**Tama Shade Nets** come in a wide variety of densities, from 17% to 90% shade, for maximum compatibility with every requirement: covering, hothouses, all-net shelters, protecting crops and fruit trees, shading cowsheds... and even screening outdoor events.

# TAMA MONOFIL<sup>2</sup>

Strong to the n<sup>th</sup> degree

Durability | Reliability | Strength

## Stronger and more resistant to tearing

The special materials from which **Monofil** net is manufactured, gives it greater durability against the forces exerted upon it, and helps prevent tearing of the net.

## Withstands stress and friction

The improved square profile of **Monofil** affords the net higher ability to withstand friction than regular nets.

This characteristic is especially important in net houses and greenhouses where the net is in constant friction with cables or metal bars.

## Does not unravel

The unique structure of the **Monofil** knit prevents the phenomenon of "laddering". If a hole is made, it does not spread beyond the damaged spot, even if the net is subject to continuous pressure.

## Reliable and precise shade percentages

**Monofil** net enables the grower to provide a precise agronomic solution to the crop's requirements.

Precise and reliable shade percentages give the professional grower a tool for success and ensure long-term peace of mind.

## Simple to erect and to store

**Monofil** is easy to spread, sits well on the structure, and can very conveniently be stored and re-used.

The net can be sewn to the width you need, even for very large sizes.

## Guaranteed 8 years against UV radiation damage

The improved squared profile of **Monofil** provides better protection against net degradation resulting from UV radiation.

## ISO 9001:2008

Tama is certified for the international Quality Management Standard ISO 9001:2008.

Tama nets are manufactured with the most advanced equipment, backed up by rich international experience.
