Control of Meters in Balenet Produced by Tama Group

Tama netwrap is manufactured with a GUARANTEED MINIMUM length, as stated on the packaging

All production machines, in all production sites, operate with the same calibrated metering systems, all of which are checked and verified once or twice per year, depending on the machine. The calibration is performed according to controlled procedures. These procedures are used by all our production sites

In addition, roll length is regularly measured and checked on a roll 'un-winding unit, to verify the accuracy of the metering equipment

All Tama Netwrap products comply with the highest global standards
